

Problem 1.3 - README

This directory contains the files used to solve Problem 1.3.

broad.py - Python script that constructs the graph, performs the broadcast search, and generates the output.

broadcast.log - Output file generated by **broad.py**. It contains the graph validation, broadcast-search results, and final broadcast schedule.

Problem_1.3_Broadcast_Solution.pdf - Final written solution to Problem 1.3, including the method, minimum broadcast time, active links, edge counts, and pseudocode.

Running the Program on Seawulf

Load the Python module on the Seawulf cluster:

```
module load python
```

Then run the script from the Problem 1.3 directory:

```
python broad.py
```

The program writes its results to **broadcast.log**.
